

# PYTHON ASSIGNMENT

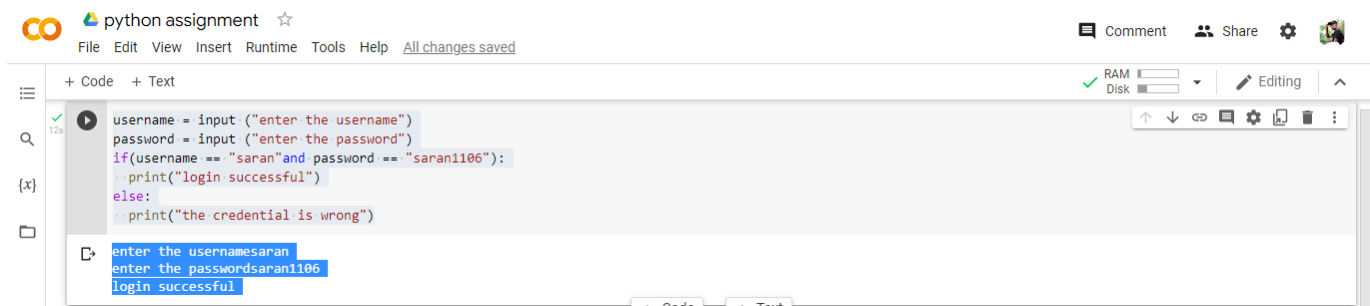

## SYNTAX

```
1. username = input("enter the username")
   password = input("enter the password")
   if(username == "saran" and password == "saran1106"):
       print("login successful")
   else:
       print("the credential is wrong")
```

OUTPUT:

```
enter the usernamesaran
enter the passwordsaran1106

login successful
```

```
[2] evennum = [i for i in range(200) if i % 2 == 0]

    print(evennum)
```

OUTPUT:

```
